Education

Ph.D. (Candidate), Economics, University of Notre Dame	Expected May 2023
M.A., Applied Economics, Georgetown University	May 2015
B.S., Mathematics and Applied Mathematics	May 2013

Research Interests

Macroeconomics, Monetary Policy, Time Series Econometrics

Job Market Paper

Quantitative Easing and Welfare Gain under Commitment Monetary Policy at Zero Lower Bound

Abstract: This paper studies the welfare gains from quantitative easing (QE) under commitment monetary policy at the binding zero lower bound (ZLB). First, this paper provides an analytical solution to the equilibrium paths under commitment policy when natural rate shock is deterministic. Second, this paper studies the welfare improvement from commitment monetary policy against discretionary monetary policy and demonstrates the efficacy of the forward guidance at the ZLB. Third, this paper investigates QE at the ZLB under discretionary and commitment policies and quantifies welfare improvement in both cases. Finally, this paper conducts robustness analyses on important parameters and constraints to corroborate the findings of QE's welfare improvement at ZLB.

Research Experience

University of Notre Dame

Research assistant to Professor Christiane Baumeister, Fall 2018, Spring 2019

Research assistant to Professor Marinho Bertanha, Fall 2017, Spring 2018

Teaching Experience

University of Notre Dame

Lecturer

Statistics for Economics, Fall 2019, Spring 2020

Teaching Assistant

Game Theory and Strategic Analysis, Professor Kali Rath, Fall 2016

Professional Experience

The World Bank Group

Research Assistant

Development Prospects Group, Aug. 2015 - May 2016

Skills

Programming: MATLAB, STATA, Python, Julia, C/C++

Software: Excel, LaTeX, Pycharm, Jupyter, Anaconda, RATS, EViews

Knowledge: Monetary Policy, Time Series Analysis (ARIMA, Bayesian VAR), Econometrics (OLS, Logit, PCA, 2SLS, IV, DiD, RDD), Machine Learning and Neural Network (k-NN, SVM, XGBoost, CNN, RNN/LSTM)
